

Mandatory Questions

1 What problem does Salesforce solve?

Companies struggle to manage customer information across emails, spreadsheets, calls, and different teams. This leads to lost leads, poor communication, and missed sales opportunities.

Salesforce solves this by providing one cloud platform to:

- Store all customer data in one place
- Track sales and leads
- Automate business processes
- Improve customer relationships

In short, Salesforce helps companies **sell faster and manage customers better**.

2 What is CRM?

CRM = Customer Relationship Management

CRM is a system used by companies to:

- Track leads and customers
- Manage communication (calls, emails, meetings)
- Improve customer satisfaction
- Increase revenue through better relationships

Simple meaning:

👉 **A digital system to manage customers and sales.**

3 What is an Object in Salesforce? Give an example.

An **Object** is like a **database table** in Salesforce that stores data.

Each object contains:

- **Fields** → columns (type of data)

- **Records** → rows (actual data)

Examples:

- Standard Objects → Lead, Account, Contact
- Custom Objects → Student, Property, Offer

Example:

The **Account object** stores company details like:

- Company Name
- Phone
- Address

4 Difference Between Salesforce Admin and Developer

Salesforce Admin

Works using clicks (no coding)

Creates objects, fields, reports

Automates workflows

Maintains Salesforce system

Salesforce Developer

Works using coding

Writes Apex & Lightning components

Builds custom apps & integrations

Extends Salesforce functionality

👉 Admin = Configure

👉 Developer = Build

5 Real-World Application Using Salesforce

Real Estate Management System

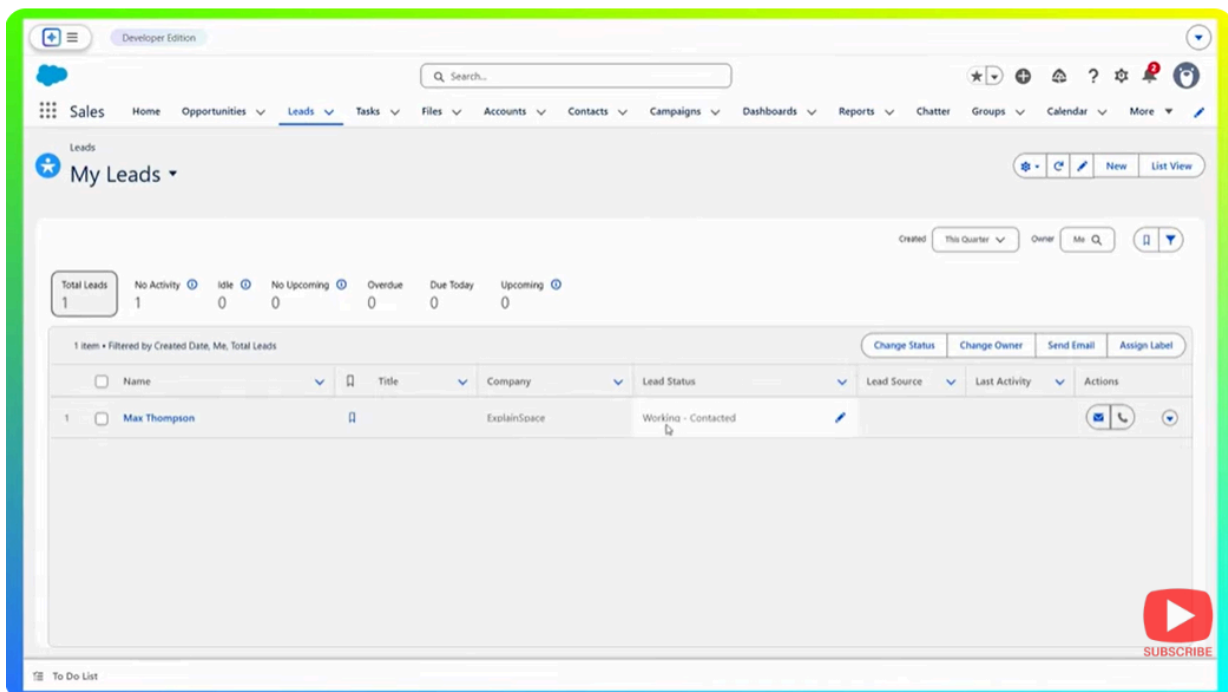

Can track:

- Properties
- Buyers & sellers
- Property visits
- Offers and deals
- Closing dates

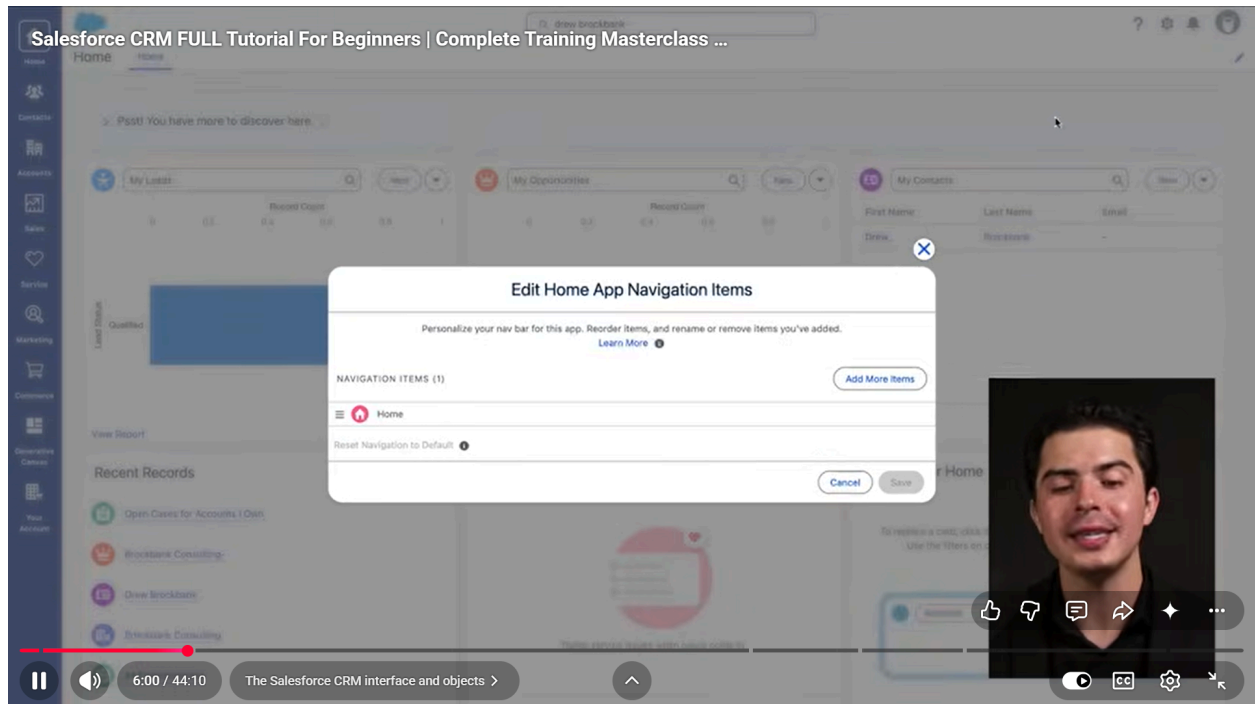

Sales teams can manage the entire property sales process in one system.
